Hurtman Rescue (Team)

(Mean Time: 4 minutes)

Simulated hot on 40' pole.

Scenario: Lineman has climbed pole and safetied off between braces. While working on phase that was not grounded, there was a back feed from a generator down line. The hand line is still on the lineman's break away hook attached to the front right side of the lineman's belt.

1. Time starts at judge's signal with lineman and groundman standing inside the painted circle 10' from the painted circle around the pole. The lineman's belt and hooks will be hanging on a structure simulating hanging in a truck bin, with safety straps snapped into D-ring and belt unbuckled. Both D-rings will be on the hook of the structure. Structure will be 10' from pole circle. Radio is located in same circle as structure.
2. At judge's signal, the lineman will retrieve tools and carry them to the pole circle or proceed to put them on at the structure. Groundman proceeds to radio to make "mayday" call giving all information (to be provided).

Groundman can assist with rescue or lineman can do it alone.

3. The handline will be hanging on the Rescue Manikin's break away hook attached to the front right side of the manikin's belt. The provided handline with Ox Block and Ox Hook must be removed from the manikin's break away hook and must hang sling over the cross arm and snap hook into sling before lowering the Rescue Manikin. The hurtman will hang in the center of the pole on the crossarm side with safety strap between the braces. Manikin must be tied under arms with three half hitches. (Eye splice shall not be used as part of hitches.) The half hitch is the only acceptable knot.

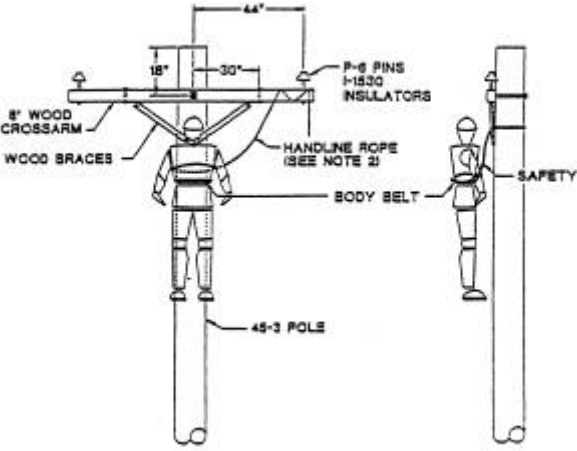

4. If the hook is to be dropped, it must land in the painted circle at the base of the pole.
5. A Buckingham 488P will be used on the manikin. You must cut the orange insert. See diagram below. **There will be a 10-point deduction for cutting the belt in the wrong place. In addition, the cost of a replacement strap will be the responsibility of the competitor's utility (approximately \$660).**
6. Manikin shall be moved smoothly to the ground, without contacting the pole.
7. Time is over when lineman touches the ground in a safe and reasonable manner.

- 5 When lineman reaches ground, groundman must complete one complete cycle of CPR on manikin (2 breaths, 30 compressions, check pulse).
- 6 Rope will be furnished for hand lines. Participants must use hand lines provided.
- 7 Exceeding four minutes to complete the event will result in a 10-point deduction.
- 8 Judging will start when participants enter the event and continue until they exit the event.
- 9 **NOTE:** Using a 4" piece of PVC conduit between the rope and the manikin, judges will evaluate the rope knotted around the manikin.
