

A1 Pole Framing

Journeyman Event
Mean Time: 4:00 minutes
Drop Dead Time: 8:00 minutes

Event Summary:

This event will require the competitor to frame a bare, single phase, straight line pole. Holes will be pre-drilled, but proper spec and spacing will be checked. This is a dead and grounded event. The lineman will not be required to carry a secondary safety on this event.

Event Description:

1. All general rules apply. Judging will start when the competitor enters the event and continue until they exit the event. The competitor will be allowed a 5 minute setup/ question time.
2. All material will be at the base of the pole. All tools and material must be raised and lowered with a hand-line and material bag.
3. Time will begin on the judge's signal with the competitor standing next to the pole. The lineman will be allowed to have their climbing tools on and material in the nose bag.
4. The lineman will ascend the pole, catch hand-line off on the pole, raise material bag, frame pole according to spec, lower material bag, then call time.
5. Once the spec is checked by the judges, the lineman will then raise the material bag and tear out the framing. The material will be lowered to the ground in the material bag and the hand-line will be railroaded to the ground. The lineman can then descend the pole.
6. The lineman will continue to be judged until he leaves the event.
