

2025 Fused Cutout Relocation
Chief Judge: Shane Scott (shane.scott@hsvutil.org)
(Senior Event)

Mean Time: 8:00 minutes

Drop Dead Time: 12:00 minutes

Event Summary:

- The senior will relocate a fused cutout on a fiberglass bracket from its original position to the opposite side of the pole. The cutout will be mounted on a double dead-end single-phase pole with the jumpers connected to the line by hotline clamps and stirrups. The source side will be considered to the left of the mounted position. This is a dead and grounded leather glove event.

Event Specifications:

1. All general rules apply
2. Senior will have 5 minutes to set up in the designated work area.
3. You may have your climbing tools on before time starts.
4. Senior may remove and replace jumpers from stirrups by hand. No stick needed.
5. A handline must be carried per general rules.
6. The senior will relocate the cutout and bracket to the opposite side of the pole.
7. The cutout door does not have to be opened.
8. The source side jumper must be removed first and then the load side. When returning to normal, the load side must be connected first then the source side.
9. After relocating the cutout, the senior may reconnect the stingers by hand.
10. The senior must railroad hand line before dropping it out and descending pole.
11. Time stops when the seniors first foot touches the ground.
